Eesti Energia Aktsiaselts is an international energy company owned by the Estonian state and part of the Group of Eesti Energia. The ambition of the Group is to offer useful and convenient energy solutions to customers and to produce energy at the same time constantly reducing environmental impacts, as this is the way to the cleaner world.

In order to manage and improve the environmental activities of the Group of Eesti Energia, we implement certified environmental management systems in accordance with the international standard ISO 14001 and the European Union standard EMAS (Eco-Management and Audit Scheme). We constantly monitor and improve our environmental management systems.

The Group of Eesti Energia activities and decisions are based on the following promises:

1. Our activities and decisions are in accordance with the principles of environmental law and environmental legislation.
2. We analyze the environmental impact and risks associated with our operations and continuously develop and improve our environmental activities.
3. We continue to reduce the carbon intensity of our energy production with the aim of achieving carbon-neutral energy production in 2045 and ending electricity production from oil shale in 2035.
4. We help our customers plan the green turn and implement it by providing a full spectrum of energy solutions. We believe that electrification and transition to renewable energy is the fastest path to carbon neutrality.

5. We reduce the impact of our activities on the environment and take into account the community interests. We use the best available technology to minimize emissions, to reduce the waste generation and to improve resource efficiency. In order to observe the environmental impacts, we organize extensive environmental monitoring and prepare environmental reports.
6. We apply the principles of the circular economy, reduce the generation of waste, and promote the recovery of waste.
7. We raise environmental awareness among our employees and society. We contribute to overall development through research and development activities, and our environmental information is public.
8. We create the preconditions for the restoration or preservation of biological diversity and ensure nature conservation where necessary.
9. We prefer sustainable procurements for services, products and raw materials.
10. We apply the principles of the Green Office in order to ensure a healthy working environment in our offices and to follow the principles of environmental protection. We reduce the use of paper, collect garbage by type, use water and heat efficiently and use environmentally friendly vehicles.
